PROCESSING

Both parts (polyol and isocyanate) have to be mixed at a temperature equal or higher than 64°F (18°C). Part A may be warmed to reduce the viscosity, however, this will shorten the pot life. Before casting, make sure that parts or molds are free of any trace of moisture.

Storage Conditions

This product has a shelf life of 12 months as indicated by the expiration date on the container when stored in original unopened containers between 59 – 77°F (15 – 25°C). Any opened can must be tightly closed. If Polyol has crystallized, it can be restored by thoroughly heating to 120 – 130°F (49 – 54°C) and agitating. Do not use if crystallized.
